

Core and More Technologies, LLC

The One-Stop Source for Software Products and Services - Powering the Enterprise and Empowering the World

BizUnity™ Basics

BizUnity enables operational transparency and helps drive stronger processes within and across your organization. With BizUnity, you can eliminate barriers and create a culture of seamless yet controlled information sharing. BizUnity promotes a closely-knit internal business community whose only boundaries are those instituted by design. Through one investment, one technology and from one company you can facilitate systemic end-to-end processes that will drive higher value for your customers and your company. The BizUnity Basics package consists of the following modules:

Corporate Intranet Portal

This simple and intuitive dashboard puts the data you need right at your fingertips. Access your email, check your available vacation time, create a purchase requisition, and more!

Profile Builder

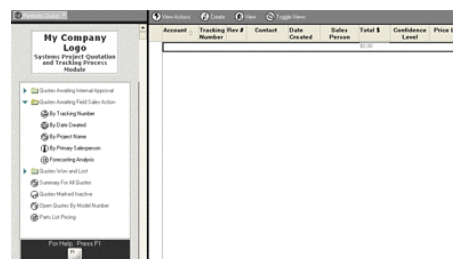

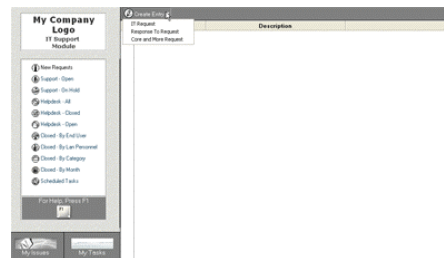

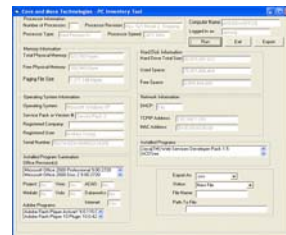

This module gathers and stores workstation information – creating an all-purpose portal for auditing, compliance and general assessment.

IT Requests & Management

This dashboard is for IT staff – however the requesting engine is available to all. Consider this a drop box for all systems requests – with an optional prioritization feed direct to Core and More Technologies!

Quotation Process & Project Tracking

This powerful workflow tool is populated with your parts and pricing. Build a BOM on the fly and export it for official quotations – while processing deviations simultaneously!

BizUnity™ Suite

The BizUnity Suite is the best value and is comprised of the entire collection of community modules. We also offer the flexibility to purchase each community as an individual add-on to the Basics package.

- Each module comes with an administrative user interface (UI) that is role based and controls all workflow functionality.
- Each “community” comes with a blog module that acts as a “town hall” – with selective e-notification options!
- Not listed is the “supplier” module that comes with the Basics package. This is a one-stop repository for all supply chain information and can be categorized by community!
- By taking advantage of our new SaaS capability, you don’t have to worry about procuring hardware or adding additional staff to support our products. WE handle the overhead so you don’t have to.

Finance Community

- ✓ IT Capital Inventory Management
- ✓ Purchase Requisitions and Processing

Sales & Marketing Community

- ✓ Business Partner Management
- ✓ Lead Generation

Engineering Community

- ✓ Engineering Change Request Management
- ✓ Parts & Manufacturing Management

HR Community

- ✓ Employee Time Tracking

Operations Community

- ✓ Customer and Technical Support Management

Please visit our website and download our PC audit tool free of charge: <http://www.coreandmoretechnologies.com>. This tool will capture and display relevant information including your operating system, disk space, memory, and all installed programs. It also has a built in export to excel feature – enabling you to offload the results to an external file for your records.

Thanks, and I look forward to discussing our services with you.
